

TABLE OF CONTENTS

LIQUIDITY	3
SWING HIGH + SWING LOW	4
LIQUIDITY POOLS	5
WEEKLY LIQUIDITY	6 - 10
DAILY LIQUIDITY	11 - 15
EXTERNAL vs INTERNAL	16 - 19
HIGH RESISTANCE vs LOW RESISTANCE	20 - 27

LIQUIDITY

- In a marketplace, there are generally two sides to the market (ask/bid)
- There will be resting orders on both sides of the market
- These orders, when at a significant levels, may form some pool(s) of liquidity
- These levels are usually some sort of swing point; we are interested in the following:
 - > Monthly, Weekly, Daily, Swing High or Swing Low Points

LIQUIDITY

SWING HIGH

- Where sellers have their stops
- Referred to as buy-side liquidity
- Sellers 'buy-back' their positions

SWING LOW

- Where buyers have their stops
- Referred to as sell-side liquidity
- Buyers 'sell-back' their positions

LIQUIDITY POOLS

LIQUIDITY - WEEKLY

- Continuations, retracements, reversals occur at these points
- Time of month + week will determine which happens

LIQUIDITY - WEEKLY

- Continuations, retracements, reversals occur at these points
- Time of month + week will determine which happens

LIQUIDITY - DAILY

- DAILY HIGH'S OR LOW'S
- Price will seek these areas with the week's candle direction
- If bullish, then price seeks daily high's
- If bearish, then price seeks daily low's

LIQUIDITY - DAILY (Bullish Scenario)

BULLISH SCENARIO

- Price takes our sellside liquidity (Daily Low)
- If bullish, then price seeks an old daily high
- Weekly candle expanding up
- Time of week aligned with economic calendar

LIQUIDITY - DAILY (Bullish Scenario)

BULLISH SCENARIO

- Price takes our sellside liquidity (Daily Low)
- If bullish, then price seeks an old daily high
- Weekly candle expanding up
- Time of week aligned with economic calendar

LIQUIDITY - DAILY (Bearish Scenario)

BEARISH SCENARIO

- Price takes our buy-side liquidity (Daily HIGH)
- If bearish, then price seeks an old daily low
- Weekly candle expanding down
- Time of week aligned with economic calendar

LIQUIDITY - DAILY (Bearish Scenario)

BEARISH SCENARIO

- Price takes our buy-side liquidity (Daily HIGH)
- If bearish, then price seeks an old daily low
- Weekly candle expanding down
- Time of week aligned with economic calendar

PRICE MOVEMENT:
INTERNAL TO EXTERNAL
BULLISH SCENARIO

PRICE MOVEMENT:
EXTERNAL TO INTERNAL
BULLISH SCENARIO

PRICE MOVEMENT:
EXTERNAL TO INTERNAL

BEARISH SCENARIO

LIQUIDITY - HIGH RESISTANCE

- Price creates a higher high
- This means price has taken our buy-side liquidity
- No longer a low resistance liquidity scenario
- WHY? Price has already taken liquidity, now it will be tougher for price to create a new higher high

PLATINUM TRADING ACADEMY

LIQUIDITY - LOW RESISTANCE

BULLISH SCENARIO

- PRICE creates lower highs and lower lows into a higher time frame point of interest
- Price takes out our sellside liquidity (daily OR weekly low)
- Aligned with economic calendar
- Weekly Candle Expansion UP

LIQUIDITY - LOW RESISTANCE

BULLISH SCENARIO

- PRICE creates lower highs and lower lows into a higher time frame point of interest
- Price takes out our sellside liquidity (daily OR weekly low)
- Aligned with economic calendar
- Weekly Candle Expansion UP

LIQUIDITY - LOW RESISTANCE

BULLISH SCENARIO

- PRICE creates lower highs and lower lows into a higher time frame point of interest
- Price takes out our sellside liquidity (daily OR weekly low)
- Aligned with economic calendar
- Weekly Candle Expansion UP

LIQUIDITY - HIGH RESISTANCE

- Price creates a lower low
- This means price has taken our sellside liquidity
- No longer a low resistance liquidity scenario
- WHY? Price has already taken liquidity, now it will be tougher for price to create a new lower

LIQUIDITY - LOW RESISTANCE

BEARISH SCENARIO

- PRICE creates higher highs and higher lows into a higher time frame point of interest
- Price takes out our BUYSIDE liquidity (daily OR weekly HIGH)
- Aligned with economic calendar
- Weekly Candle Expansion DOWN
